communication

Varia-Click system

An innovative aluminium click system specially developed for decorative façade and wall covering. Possible surface treatments: **powder coating, anodising & sublimation (wood look, stone look and metal look).**

Varia-Click system... click and done!

Varia-Click is developed specially for decorative wall cladding for both indoor and outdoor use. It allows you to easily click aluminium profiles onto interior walls, ceilings and façades, among other things. The base profile is mounted first. Afterwards, the top profile is clicked on top of the base. In this way, the fixings always remain hidden and the whole is beautifully finished.

The top profile is also available in wood look! A perfect low-maintenance and lighter alternative to wood slats/profiles.

Ask for your
free sample!

Possible applications with Varia-Click:

- Creation of chic slatted walls (with or without lighting)
- Embellishment of walls and ceilings (indoors and outdoors)
- Acoustic application in combination with PET felt panels
- Concealing cables (indoors and outdoors)
- Applicable at trade fairs and exhibitions (stand construction)

Also available:
profiles in another
colour with matching
end cap

Mitred profiles in combination with a corner solution

Varia-Click with wood grain finish directly from stock

Do you want to use sustainable and recyclable material in your design, while at the same time retaining the warm look of traditional wood? Varia-Click profiles in wood grain finish are a perfect, low-maintenance and colourfast alternative to wooden block profiles! For example, Comhan supplies the top profiles directly from stock in the colours **Oak Textured (73)**, **Natural Oak Textured (78)**, and **American cherry Textured (18)**.

These aluminium profiles are sublimated: they look as if they are made of wood, but without the disadvantages of real wood.

Advantages compared to preserved wood:

- A natural look without the costs of wood.
- Ability to neatly hide cords and cables.
- Lighter in weight and at the same time strong enough, therefore extremely practical.
- The applied coating protects against environmental influences (painting not necessary).
- Sustainable material: aluminium is very easy to recycle (without loss of quality).

Explanation of sublimation technique

A mill (untreated) aluminium profile is first pre-painted with a powder coating. The profile is then covered with a sublimation transfer. To allow the decoration to be transferred to the profile itself, the latter is placed in an oven at a high temperature: thanks to a combination of heat and pressure, the pigment molecules are dispersed in the form of gas, passing through the pre-printed film support to the paint layer of the profile, definitively transferring to the aluminium.

Varia-Click Wall-Mount Profile 200

The latest addition to our range is the Varia-Click Wall-Mount Profile 200 mm. This wall-mount profile allows you to cover a part of the wall in one go. You can click the Varia-Click profiles onto the back faster and always accurately. Mainly extremely useful for attaching aluminium square tubes to high walls and façades.

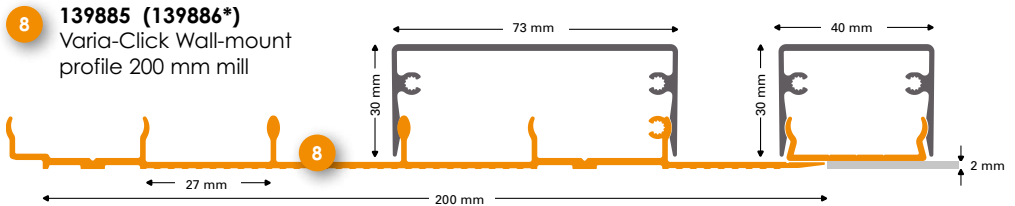

The aluminium wall-mount profile 200 can be combined with the top profiles **40x30 mm** and **73x30 mm**.

New!

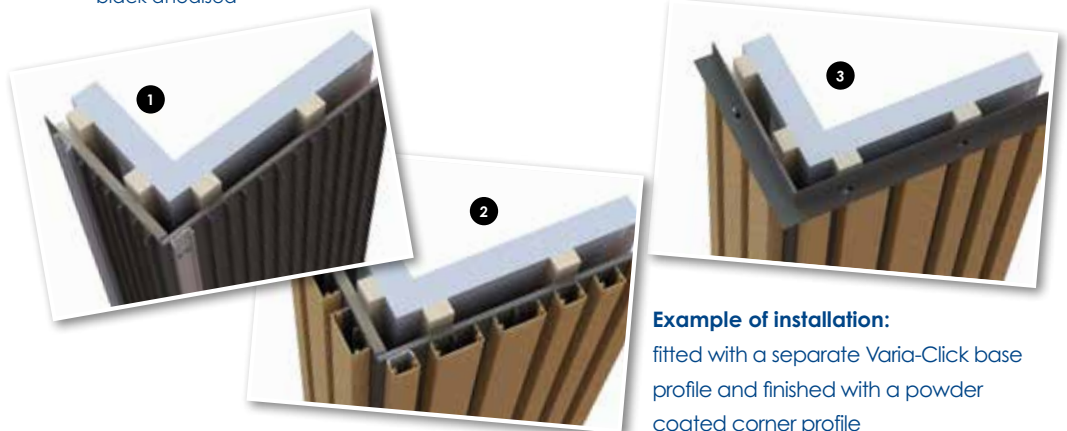

Various corner solutions and finishes

The new aluminium wall-mount profile can be made to fit on a wall in various ways. The separate base profiles 40 mm and 73 mm can be used, in combination with aluminium profiles such as a corner profile or flat bar (2 mm thick). These aluminium profiles can also neatly cover the top of the wall-mount profile.

Comhan supplies all aluminium profiles directly from stock (mill/untreated) and upon request anodised or powder-coated in a matching colour.

* black anodised

Example of installation:

fitted with a separate Varia-Click base profile and finished with a powder coated corner profile

Varia-Click Wall-Mount Profile 200

Wall-mount profile versus 'loose' base profiles

The advantage of this aluminium wall-mount profile compared to the 'loose' Varia-Click base profiles is that you no longer have to measure the distance between the profiles. The distance on the wall-mount profile is, therefore, always the same. The Varia-Click wall-mount profile 200 mm can be combined with the top profiles 40x30 mm and 73x30 mm.

Do you want to have control over the distance between the profiles and/or click other dimensions onto the wall? In that case it is better to order and mount the single base and top profiles separately.

Varia-Click Wall-Mount Profile 200

Profiles in a different size or a customer-specific profile

In addition to the standard range, Comhan supplies many customer-specific profiles for various projects. Do you need a Varia-Click profile in a specific size, or another unique extrusion profile? This is possible up from 500 kg. We are happy to help you with the development and production of a new profile, and we keep it in stock for you.

Comhan can offer you:

- **More than 70 years of technical knowledge** to create an optimised aluminium profile tailored to your needs.
- **Best choice-for-purpose** from an extensive selecting of manufacturers.
- Available from stock so always **delivered just in time.**
- Always with the best optimised surface treatment for your purpose: **powder coating, anodising & sublimation.**
- Virtually all 3D (CNC) sheet and profile processing operations under one roof.

Would you like to receive more information?

Let us think along with you and we will offer you the best solution for aluminium extrusion. Contact our specialists at **+31 297 513 636** or **comhan@comhan.com**.
